

Eloise Pariset, NASA Researcher

Growing up in a small Alsatian town, Eloïse longed to expand her horizons. Thanks to an early passion for biology, physics and medicine, she embarked on an incredible learning journey. She started to work as a researcher at The French Alternative Energies and Atomic Energy Commission (CEA). She had been rewarded for her important contributions to the progress of science by the very famous international award L'Oréal-UNESCO for Women and Science.

Now a scientific researcher for NASA's Human Research Program where she studies the effects of space radiation on astronauts' health and on her way to new exciting projects, she tells her story. While helping others may not be rocket science, it's not always easy.
